

MASTERSTROKE – Agentic AI Systems Engineer

Designing, deploying, and operating autonomous, tool-using AI systems at production scale.

Program Overview

This program focuses on building real-world agentic systems capable of planning, reasoning, using tools, and operating safely in production environments.

Who This Program Is For

- Software engineers transitioning into applied AI roles
- AI engineers building agent-based systems
- Professionals moving into autonomous AI development

Core Focus Areas

- Agent architectures and orchestration
- Tool calling and execution loops
- Memory, planning, and control flows
- Evaluation, safety, and reliability

Program Outcome

Graduates design and deploy production-grade agentic AI systems that go far beyond simple prompt workflows.
